### **Business**

#### **HIGHWAYS**

- Private development of transportation infrastructures
- Management of 21 concessions in 10 countries, including Toronto's 407 ETR and the Express Lanes NTE, NTE35W and LBJ in Texas, I-77 in North Carolina, and I-66 in Virginia

#### **AIRPORTS**

- One of the world's largest airport investors and operators
- More than 25 years of experience in investing, developing and operating 36 airports around the world
  - 4 airports in United Kingdom
  - 1 airport in United States
  - 1 airport in Türkiye

#### **CONSTRUCTION**

- Recognized worldwide for its design and construction capabilities in landmark projects in the areas of civil engineering and construction, mainly in large transport infrastructure
- Over 55 years of international activity in more than
   50 countries on 5 continents
- Design, construction, operation and maintenance of drinking water, urban wastewater, industrial and desalination treatment plants

#### **ENERGY**

- Execution and asset management in Latin America and Spain
- Development and operation of renewable energy plants

### **Circular Economy**

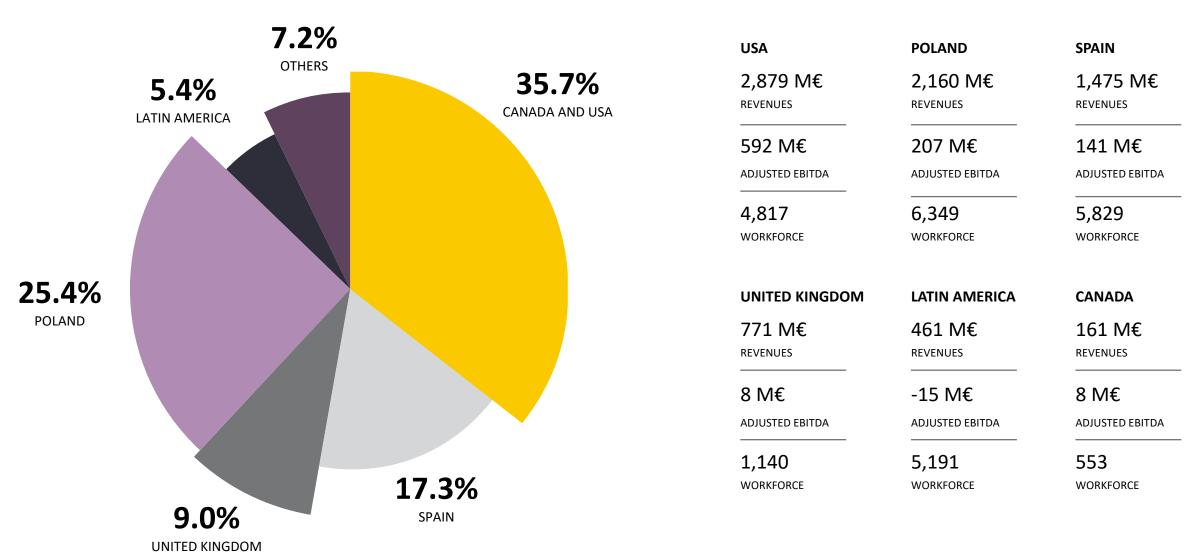

Waste management

Plates Recognition State Recognition Plate Type Recognition

Advanced Synthetic Images: - 3D Simulation + GAN

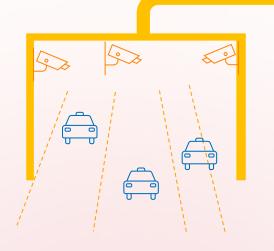

Power Lines

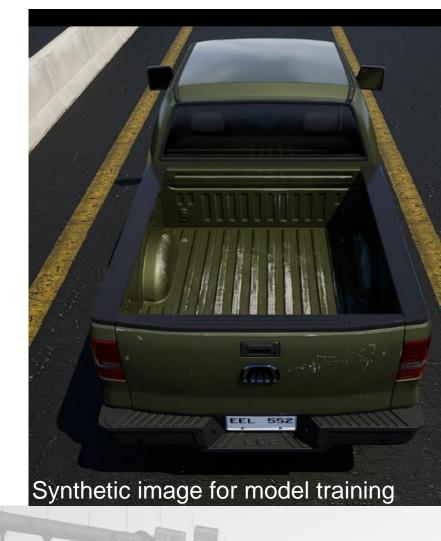

## **Vehicle Identification**

Al Algorithm detecting:

- Plate number
- Plate Type
- Plate State

98% Plates Identified properly.
Significant reduction of manual reviewing process needed due to error rate reduction.

ferrovial

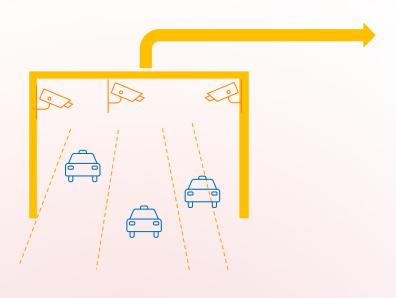

Detección de condiciones

climatológicas usando

**Computer Vicion** 

### **El Reto**

Usando las cámaras que Ferrovial tiene en sus infraestructuras (autopistas y obra), desarrollar un modelo que etiquete en Tiempo real las condiciones climatológicas de las imágenes que entren al modelo.

El reto consiste en elaborar un modelo que etiquete las condiciones climatológicas que detecte en la imagen.

Como detecciones mínimas alcanzables (opcional clasificar como Leve, media e intensa), se especifican:

- Lluvia
- Nieve
- Viento
- Granizo
- Niebla
- Tormenta arena
  - Heladas

### Datos de origen

Debido a la dificultad de proveer para el reto, de un set de datos o acceso en tiempo real a las cámaras de la plataforma, proponemos le uso de COCO como data set de origen.

trilokesh/WeatherData · Datasets at Hugging Face

maagic6/weather\_restoration · Datasets at Hugging Face

Igualmente, se permite y valorará el uso de otros dataset para el entrenamiento de los modelos.

### Criterios de valoración

- 1. Avance de prototipado (productibilidad)
- 2. Número de tipos de predicciones o inclemencias detectables
  - 1. Se valorará la capacidad de realizar predicciones meteorológicas de corto plazo (por ejemplo, si está muy nublado y las nubes son muy negras dar una estimación de la probabilidad de lluvia en la siguiente hora).
  - 2. Estimar la hora a la que deja de haber luz suficiente para que las detecciones sean fiables.
- 3. Rendimiento y Precisión
- 4. Diseño técnico
  - 1. Modelos base y frameworks de CV utilizados
  - 2. Originalidad de los modelos
- 5. Aplicabilidad a Edge computing
